Product Description

Aureomycin® (chlortetracycline) is a Type A Medicated Article, available in granular and meal formulations, for disease control in chickens, including laying hens, turkeys and ducks and for disease treatment in psittacine birds. Aureomycin contains 50, 90 or 100 grams of chlortetracycline activity per pound of premix.

Indications for Use

• For control of infectious synovitis (Mycoplasma synoviae) in chickens and turkeys

• For the control of chronic respiratory disease (CRD) and air sac infection (M. gallisepticum, Escherichia coli) and the reduction of mortality due to E. coli in chickens

• For the control of complicating bacterial organisms associated with bluecomb (transmissible enteritis; coronaviral enteritis) and hexamitiasis (Hexamita meleagridis) in turkeys

• For the reduction of mortality due to paratyphoid (Salmonella typhimurium) in turkeys

• For the control and treatment of fowl cholera caused by Pasteurella multocida in ducks

• For the treatment of psittacosis caused by Chlamydia psittaci in psittacine birds

Key Points

• Aureomycin may be used in laying chickens*

• Broad-spectrum antibiotic

• Provides protection against a wide range of respiratory and enteric diseases

• Chilsonation process helps to improve flowability, improve stability and minimize dust¹

FDA Status

• Category 1 drug and does not require a feedmill license for manufacture of medicated feeds

• Approved for use in combination with Bio-Cox® (broiler chickens), Robenz® (broiler chickens) and monensin (broiler chickens)**

Storage and Packaging

• Store below 25° C (77° F), excursions permitted to 37° C (99° F)

• Aureomycin is packaged in a 50-pound, multiwall paper bag with protective barrier ply

Withdrawal Information

• No withdrawal is required prior to slaughter when used according to label

See reverse side for complete noncombination-use directions, product claims and additional information on this product.

*Aureomycin combined with other drugs may not be approved for use in layers. Refer to 21 CFR 128 or consult your Zoetis representative.

CAUTION: Federal law restricts medicated feed containing this veterinary feed directive (VFD) drug to use by or on the order of a licensed veterinarian.
## Poultry Information: Chlortetracycline — Type A Medicated Article

**Active Drug Ingredient**: Chlortetracycline calcium complex

**Ingredients**: Dried *Streptomyces aureofaciens* fermentation product and calcium sulfate

**For Use in the Manufacture of Medicated Animal Feeds. For Use in Dry Feed Only. Not for Use in Liquid Medicated Feeds.**

<td>Psittacine Birds</td>
<td>10</td>
<td>For the treatment of psittacine birds (parrots, macaws and cockatoos) suspected or known to be infected with <em>Psittacosis caused by Chlamydia psittaci</em> sensitive to chlortetracycline. Feed continuously for 45 days. Each bird should consume an amount of medicated feed equal to one-fifth of its body weight daily. During treatment, parrots, macaws and cockatoos should be kept individually or in pairs in clean cages. CAUTION: Aspergillosis may occur following prolonged treatment. WARNING: Psittacosis, avian chlamydiosis or ornithosis is a reportable communicable disease, transmissible between wild and domestic birds, other animals and man. Contact appropriate public health and regulatory officials.</td>
